

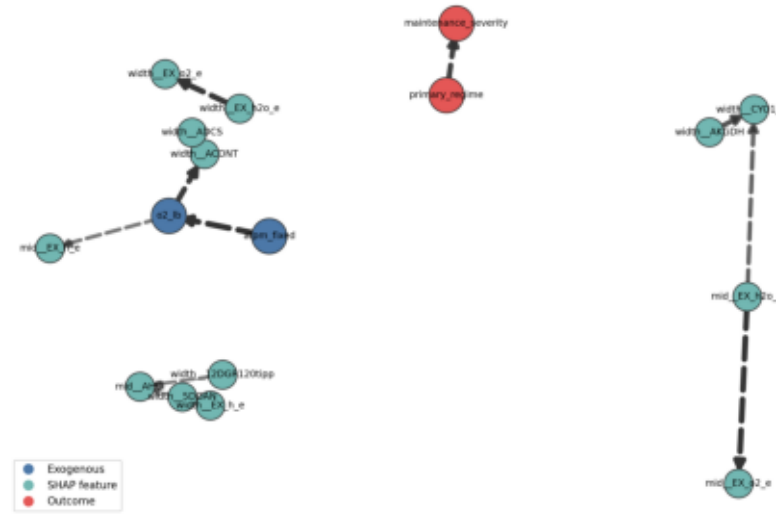

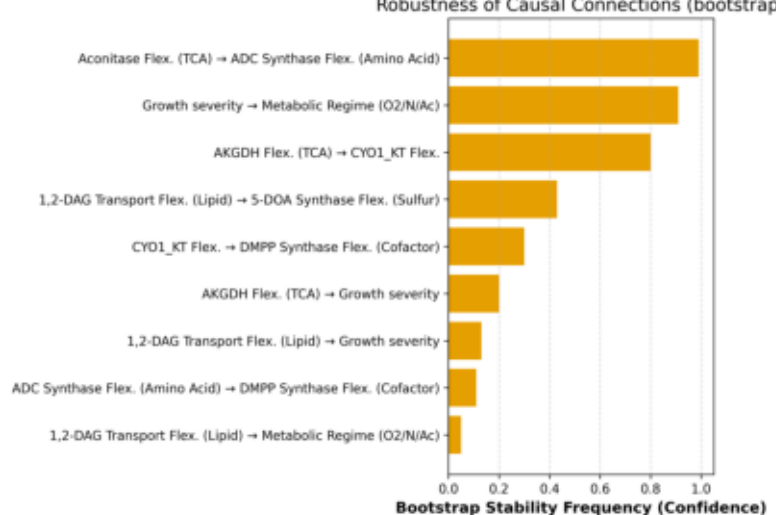

Fig 6 before / after — arrow-convention audit (workstream #E). Underlying PC bootstrap emitted 100 % undirected edges; the re-rendered version (bottom row) removes arrowheads and replaces '→' with '—' to match algorithmic output.

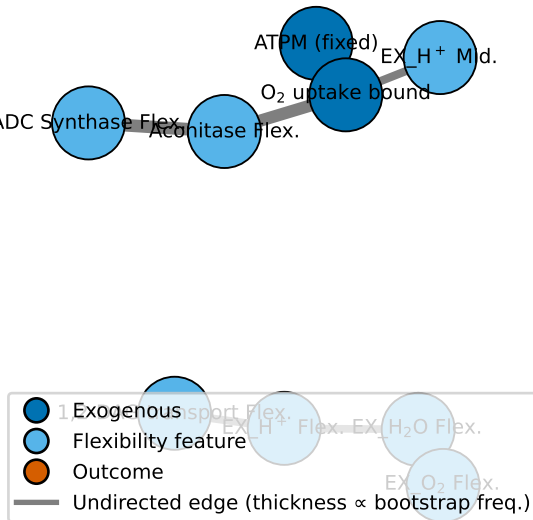

(BEFORE — published Fig 6a)
Arrowheads imply orientation

(BEFORE — published Fig 6b)
'→' labels imply direction

(AFTER) Undirected adjacency (PC output)

(AFTER) Stability with '—' separator
